GO BP Enrichment — Down−Regulated DEGs
(BALB/c & C57BL/6, Top4 per group −> 23 unique terms)
BALB
C57
very−low−density lipoprotein particle remodeling
positive regulation of epithelial cell proliferation
noradrenergic neuron differentiation
mast cell cytokine production
pyridine nucleotide metabolic process
pyridine−containing compound metabolic process
nicotinamide nucleotide metabolic process
myeloid cell homeostasis
hydrogen peroxide metabolic process
hydrogen peroxide catabolic process
generation of precursor metabolites and energy
erythrocyte homeostasis
erythrocyte differentiation
erythrocyte development
cilium or flagellum−dependent cell motility
cilium movement involved in cell motility
cilium movement
cilium−dependent cell motility
porphyrin−containing compound biosynthetic process
extracellular structure organization
extracellular matrix organization
external encapsulating structure organization
collagen metabolic process
